- Supporting AWS API Gateway event.

# CHAPTER 1

---

## Examples

---

- S3 trigger check :
  - Checking for event Records.

```
from aws.event import s3_trigger_event_check

@s3_trigger_event_check
def handler(event, context):
    try:
        pass
    except Exception as e:
        raise e
```

- Cloud Watch Event :
  - Checking for event id.

```
from aws.event import cloud_watch_trigger_event_check

@cloud_watch_trigger_event_check
def handler(event, context):
    try:
        pass
    except Exception as e:
        raise e
```

- API Gateway Event :
  - Checking only http method.

```
from aws.event import api_gateway_trigger_event_check
```

(continues on next page)

(continued from previous page)

```
@api_gateway_trigger_event_check
def handler(event, context):
    try:
        pass
    except Exception as e:
        raise e
```
